These specifications are service target specs.

Specifications and components are subject to change without notice.

Overall performance will be maintained or improved.

ELECTROSTATICALLY SENSITIVE (ES) DEVICES

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some fieldeffect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by static electricity.

- 1. Immediately before handing any semiconductor component or semiconductor-equipped assembly. drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed for potential shock reasons prior to applying power to the unit under test.
- 2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
- 3. Use only a grounded-tip soldering iron to solder or unsolder ES devices
- 4. Use only an anti-static solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
- 5. Do not use freon-propelled chemicals. These can generate electrical charge sufficient to damage ES devices.
- 6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
- 7. Immediately before removing the protective material from the leads of a replacement ES device. touch the protective material to the chassis or circuit assembly into which the device will be installed.
 - CAUTION: Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.
- 8. Minimize bodily motions when handling unpacked replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES device.)

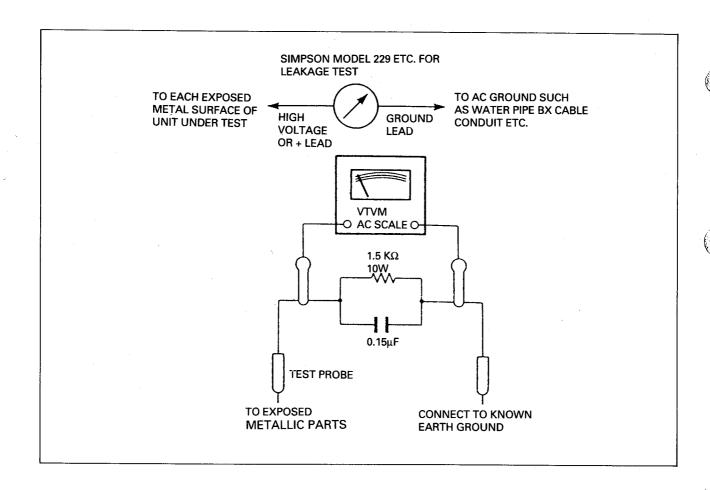

LEAKAGE TEST

Before returning the unit to the user, perform the following safety checks:

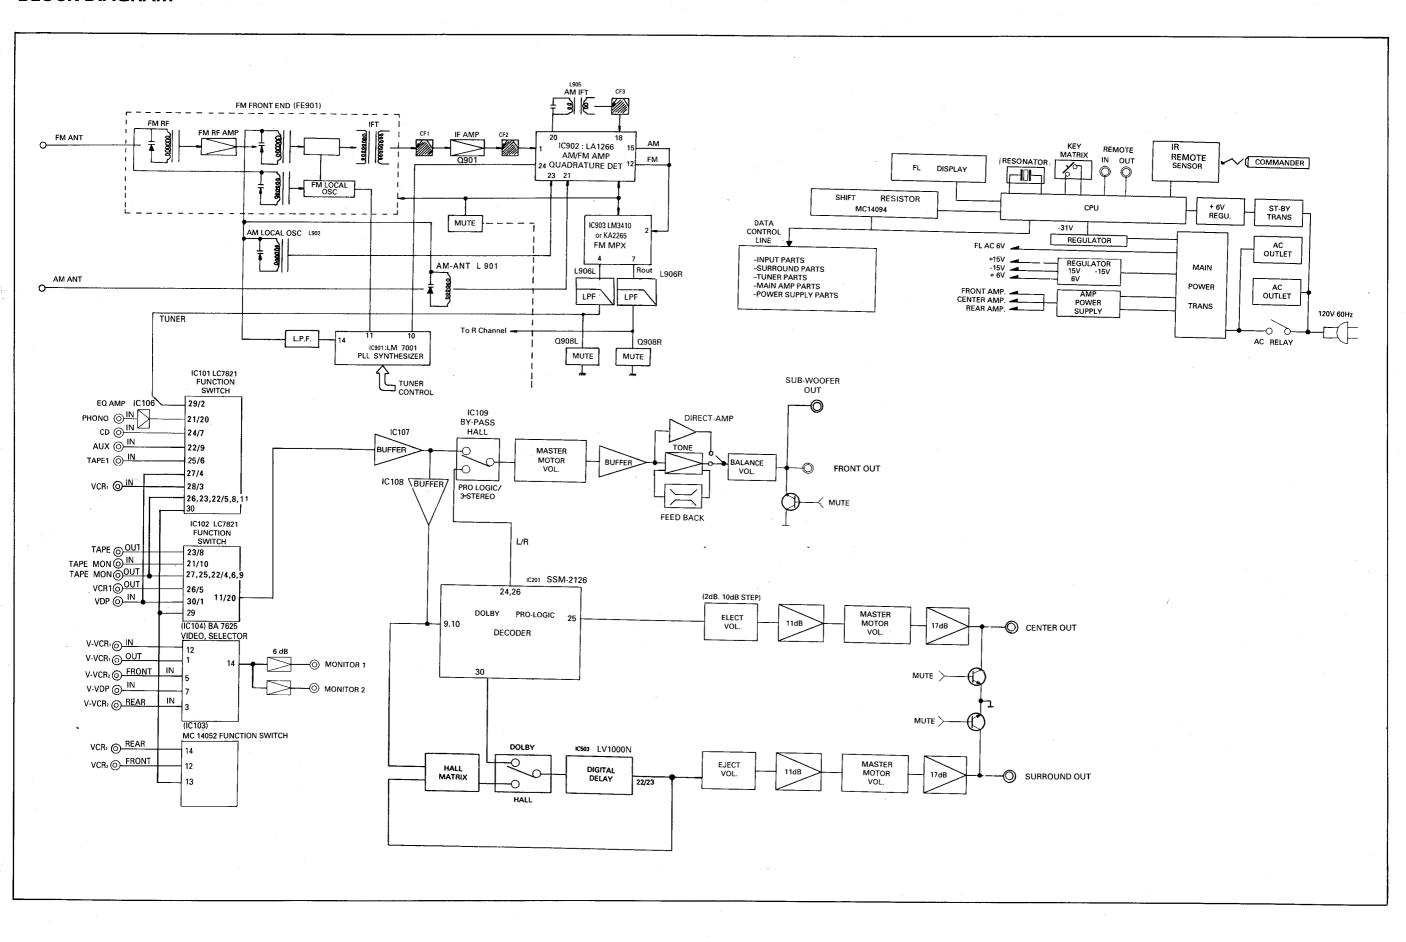

- Inspect all lead dress to makes certain that leads are not pinched or that hardware is not lodged between the chassis and other metallic parts in the unit.
- Be sure that any protective devices such as nonmetallic control knobs, insulating fishpapers, cabinet backs, adjustment and compartment covers or shields, isolation resistor-capacity networks, mechanical insulators, etc. Which were removed for servicing are properly reinstalled.
- Be sure that no shock hazard exists; check for leakage current using Simpson Model 229 Leakage Tester, standard equipment item No. 21641, RCA Model WT540A or use alternate method as follows: Plug the power cord directly into a 120-volt AC receptacle (do not use an Isolation Transformer for this test).

Using two clip leads, connect a 1500 Ohm. 10-watt resistor paralleled by a 0.15 uF capacitor, in series with all exposed metal cabinet parts and a known earth ground, such as a water pipe or conduit. Use a VTVM or VOM with 1000 Ohms per volt, or higher sensitivity to measure the AC voltage drop across the resistor. (See Diagram.) Move the resistor connection to each exposed metal part having a return path to the chassis (antenna, metal cabinet, screw heads, knobs and control shafts, escutcheon, etc.) and measure the AC voltage drop across the resistor. (This test should be performed with the power switch in both the On and Off positions.)

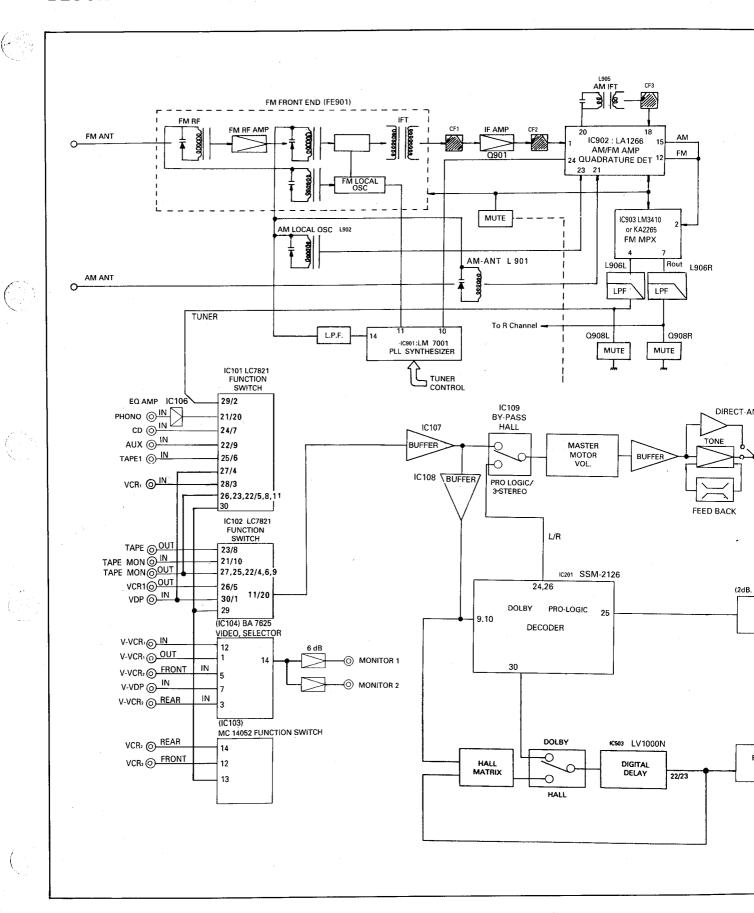

A reading of 0.35 volt RMS or more is excessive and indicates a potential shock hazard which must be corrected before returning the unit to the owner.

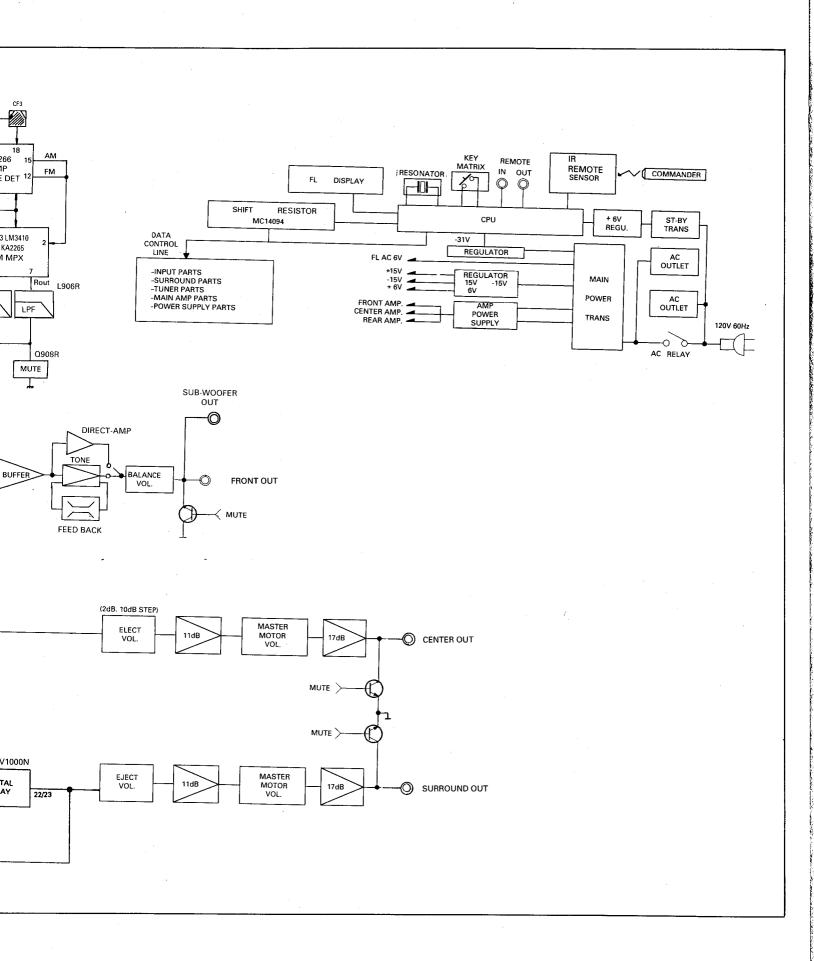

BLOCK DIAGRAM

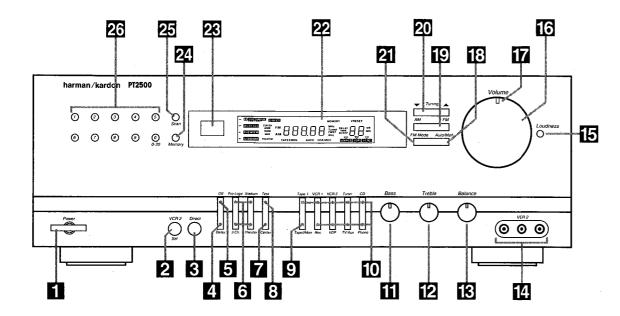

BLOCK DIAGRAM

CONTROLS AND FUNCTIONS

- 1 Power Switch: Press this button to turn the PT2500 on or off. In order to use the power button on the remote this power switch must be pressed once and left in the "standby" mode. Note that a green indicator around the switch will illuminate when the unit is on, and an orange "standby" indicator will illuminate when the unit has been turned off using the remote control.
- **VCR2 Selector:** Press this button to select the front panel VCR2 inputs rather than the rear panel inputs.
- Direct Input Selector: Press this button to select direct input to the preamp circuits, bypassing all tone controls and surround processing. When this feature is activated, the DIRECT indicator illuminates within the information display.
- **Delay Time Adjust:** Press this button to adjust the delay time between the front and rear channels.

- **Surround Off:** Press this button to select conventional two channel stereo reproduction and to cancel surround processing.
- **6** Surround Mode Selectors: Press one of these buttons to select a surround processing mode.
- **7** Center Channel Mode Selector: Press this button to change the center channel mode.
- 13 Test Mode Selector: Press this button to place the unit in the Test mode for adjustment of system output levels.
- **19 Tape 2 Monitor:** Press this button to monitor the output of the tape deck connected to the Tape 2 Inputs. For normal operation this control should be in the off position.
- **10** Input Selectors: Press one of these buttons to select an input source.

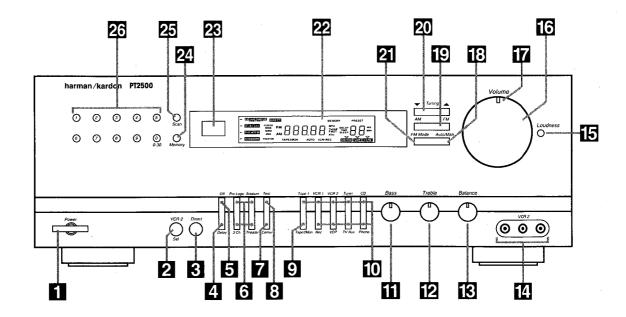

- Bass Control: Turn this control to adjust the low frequency output of the left/right channels by as much as ±10dB. Set this control to a suitable position for your taste and room acoustics.
- Treble Control: Turn this control to adjust the high frequency output of the left/right channels by as much as ±10dB. Set this control to a suitable position for your taste and room acoustics.
- Balance Control: Turn this control to change the relative volume for the front left/right channels.

NOTE: For normal operation of the surround modes this control should be at the midpoint, or "12 O'clock" position.

- VCR2 Inputs: This alternate set of VCR2 Inputs may be used for the connection of a camcorder or video game. Select this input by pressing the VCR2 button 2 on the front panel.
- **Loudness Button:** Press this button when listening at low levels to activate special circuits that compensate for the response of the human ear at lower volumes. In the off position the unit will provide flat frequency response.
- **16** Volume Control: Rotate this control to raise or lower the volume. Note that this is a motorized control, and when the volume is changed using the remote control **1** it will move in response to remote commands.
- Mute/Volume Indicator: In normal operation this green LED provides a relative indication of the unit's volume level. When the PT2500 is in the MUTE mode, this indicator flashes to remind you that output to the speakers has momentarily been silenced.
- Auto/Man Selector: Press this button to select AUTO or MANUAL tuning. In the AUTO mode the tuner will stop only at stations with a strong signal. In the MANUAL mode the tuner will step in 50 kHz increments for FM and 10 kHz increments for AM.
- AM/FM Selector: Press this button to select AM or FM stations.

- **20 Up/Down Tuning Button:** Press the left side ▼ of the button to tune lower frequency stations and the right side ▲ of the button to tune higher frequency stations. When a station with a strong frequency is tuned, the TUNED indicator will illuminate in the Information Display **22**.
- FM Mode: Press this button to select the stereo or mono mode for FM tuning. In the STEREO mode an FMS,T indicator will illuminate in the information display, and stereo reception will be provided when stations are transmitting stereo signals. In the MONO mode the left and right signals from stereo broadcasts will be mixed together and reproduced through all channels. Select the MONO mode for better reception of weak signals.
- **22** Information Display: The indicators in this display illuminate to provide visual display of the unit's operation.
- Remote Sensor: This sensor receives the signals from the remote control to operate the unit. Do not block this area.
- 24 Tuner Memory Button: Press this button to store an AM or FM frequency in the unit's memory. The MEMORY indicator will flash in the display to remind you to choose a numeric location using Numeric Buttons on the front panel or remote (26 4). Press this button a second time to complete the memorization process. Storing a station in a memory location that has already been used will overwrite the existing data.
- **NOTE:** The preset memories are protected from power loss for two weeks. If the unit is unplugged for more than two weeks all stored frequencies will be erased.
- Preset Scan Button: Press this button to scan the stations entered in the unit's memory. When the desired station is reached, press the button again to stop the scan.
- **25 Numeric Buttons:** Use these buttons to enter or recall stations from the tuner memory.

CONTROLS AND FUNCTIONS

- Power Switch: Press this button to turn the PT2500 on or off. In order to use the power button on the remote this power switch must be pressed once and left in the "standby" mode. Note that a green indicator around the switch will illuminate when the unit is on, and an orange "standby" indicator will illuminate when the unit has been turned off using the remote control.
- **2 VCR2 Selector:** Press this button to select the front panel VCR2 inputs rather than the rear panel inputs.
- 3 Direct Input Selector: Press this button to select direct input to the preamp circuits, bypassing all tone controls and surround processing. When this feature is activated, the DIRECT indicator illuminates within the information display.
- **4 Delay Time Adjust:** Press this button to adjust the delay time between the front and rear channels.

- **Surround Off:** Press this button to select conventional two channel stereo reproduction and to cancel surround processing.
- **6** Surround Mode Selectors: Press one of these buttons to select a surround processing mode.
- **T** Center Channel Mode Selector: Press this button to change the center channel mode.
- 13 Test Mode Selector: Press this button to place the unit in the Test mode for adjustment of system output levels.
- **Tape 2 Monitor:** Press this button to monitor the output of the tape deck connected to the Tape 2 Inputs. For normal operation this control should be in the off position.
- **input Selectors:** Press one of these buttons to select an input source.

- Bass Control: Turn this control to adjust the low frequency output of the left/right channels by as much as ±10dB. Set this control to a suitable position for your taste and room acoustics.
- Treble Control: Turn this control to adjust the high frequency output of the left/right channels by as much as ±10dB. Set this control to a suitable position for your taste and room acoustics.
- **Balance Control:** Turn this control to change the relative volume for the front left/right channels.

NOTE: For normal operation of the surround modes this control should be at the midpoint, or "12 O'clock" position.

- 14 VCR2 Inputs: This alternate set of VCR2 Inputs may be used for the connection of a camcorder or video game. Select this input by pressing the VCR2 button 2 on the front panel.
- **E** Loudness Button: Press this button when listening at low levels to activate special circuits that compensate for the response of the human ear at lower volumes. In the off position the unit will provide flat frequency response.
- **[6] Volume Control:** Rotate this control to raise or lower the volume. Note that this is a motorized control, and when the volume is changed using the remote control **[4]** it will move in response to remote commands.
- Mute/Volume Indicator: In normal operation this green LED provides a relative indication of the unit's volume level. When the PT2500 is in the MUTE mode, this indicator flashes to remind you that output to the speakers has momentarily been silenced.
- **B** Auto/Man Selector: Press this button to select AUTO or MANUAL tuning. In the AUTO mode the tuner will stop only at stations with a strong signal. In the MANUAL mode the tuner will step in 50 kHz increments for FM and 10 kHz increments for AM.
- AM/FM Selector: Press this button to select AM or FM stations.

- **20 Up/Down Tuning Button:** Press the left side ▼ of the button to tune lower frequency stations and the right side ▲ of the button to tune higher frequency stations. When a station with a strong frequency is tuned, the TUNED indicator will illuminate in the Information Display 22.
- 21 FM Mode: Press this button to select the stereo or mono mode for FM tuning. In the STEREO mode an F M S,T indicator will illuminate in the information display, and stereo reception will be provided when stations are transmitting stereo signals. In the MONO mode the left and right signals from stereo broadcasts will be mixed together and reproduced through all channels. Select the MONO mode for better reception of weak signals.
- **22 Information Display:** The indicators in this display illuminate to provide visual display of the unit's operation.
- **Remote Sensor:** This sensor receives the signals from the remote control to operate the unit. Do not block this area.
- **21 Tuner Memory Button:** Press this button to store an AM or FM frequency in the unit's memory. The MEMORY indicator will flash in the display to remind you to choose a numeric location using **Numeric Buttons** on the front panel or remote (**26 4**). Press this button a second time to complete the memorization process. Storing a station in a memory location that has already been used will overwrite the existing data.

NOTE: The preset memories are protected from power loss for two weeks. If the unit is unplugged for more than two weeks all stored frequencies will be erased.

- **The Preset Scan Button:** Press this button to scan the stations entered in the unit's memory. When the desired station is reached, press the button again to stop the scan.
- **23 Numeric Buttons:** Use these buttons to enter or recall stations from the tuner memory.

DISASSEMBLY PROCEDURES

REFER TO PAGES (23-24).

- TOVER TOP REMOVAL

 Remove 6 screws 2 and 2 screws 1 and then remove the Cover Top 50.
- 2 COVER BOTTOM REMOVAL

 Remove 9 screws 3 and the remove the Cover
 Bottom 3 .

3 FRONT PANEL ASSEMBLY REMOVAL

- 1. Remove the Cover Top 50, referring to the previous step 1.
- 2. Remove the card cable from wafer (CP802 and CN502) on the Dolby P.C.Board (PCB5).
- 3. Remove the card cable from wafer (CP803) on the Tuner P.C.Board (PCB9).
- Disconnect (CP401) from the Dolby P.C.Board (PCB5).
- 5. Disconnect (CP402) from the Main P.C.Board (PCB1).
- 6. Disconnect (CP801) from the Power Supply P.C.Board (PCB1).
- 7. Remove lug wire from the right Frame 29.
- 8. Remove 4 screws S5, 4 screws S1 and then remove the Front Panel Assembly AA.

4 VOLUME P.C.BOARD (PCB3) REMOVAL

- 1. Remove the Cover Top 50, referring to the previous step 11.
- 2. Remove the Front Panel Assembly (AA), referring to the previous step [3].
- 3. Pull out the Volume Knob 6 with Volume LED P.C.Board (PCB6).
- 4. Remove the Hex Nut from the volume-motor 23.
- 5. Remove 2 screws 1 and then remove the Volume P.C.Board (PCB3).

5 TONE P.C.BOARD (PCB4) REMOVAL

- 1. Remove the Cover Top 50, referring to the previous step 1.
- 2. Remove the Front Panel Assembly (AA), referring to the previous step [3].
- 3. Pull out the Bass/Treble/Balance knobs 8.
- 4. Remove the Hex Nuts from the variable resistors 19, 20.
- 5. Remove 4 screws 1 on the Tone P.C.Board (PCB4) and then remove it.

6 FRONT P.C.BOARD (PCB8) REMOVAL

- 1. Remove the Cover Top 50, referring to the previous step 1.
- 2. Remove the Front Panel Assembly (AA), referring to the previous step [3].
- 3. Remove 11 screws on the Front P.C.Board (PCB8) and then remove by pressing the hooks around it outward.

7 DOLBY P.C.BOARD (PCB5) REMOVAL

- 1. Remove the Cover Top 50, referring to the previous step 1
- 2. Remove the card cable from wafer (CP802,CN501,CN502) on the Dolby P.C.Board (PCB5).
- 3. Disconnect (CP401) from the Dolby P.C.Board (PCB5).
- 4. Disconnect (CP501) from the Tuner P.C.Board (PCB9).
- 5. Remove lug wire from the left Frame 35.
- 6. Unjoin 2 Fasteners 33 and then remove the Dolby P. C. Board (PCB5).

8 TUNER P.C.BOARD (PCB9) REMOVAL

- 1. Remove the Cover Top 50, referring to the previous step 1
- 2. Remove the card cable from wafer (CP803) on the Tuner P.C.Board (PCB9)
- 3. Disconnect (CP102 and CP501) from the Tuner P.C.Board (PCB9).
- 4. Remove 4 screws §1 from the Chassis Back
- 5. Remove 2 screws 55 on the Tuner P.C.Board (PCB9) and then remove it.

9 REGULATOR P.C.BOARD (PCB2) REMOVAL

- 1. Remove the Cover Top 50, referring to the previous step 1
- 2. Disconnect (CP103) from the Main P.C.Board (PCB1).
- 3. Remove screw 1 from the left Frame 15 and then remove the Regulator P.C.Board (PCB2).

10 POWER SUPPLY P.C.BOARD (PCB7) REMOVAL

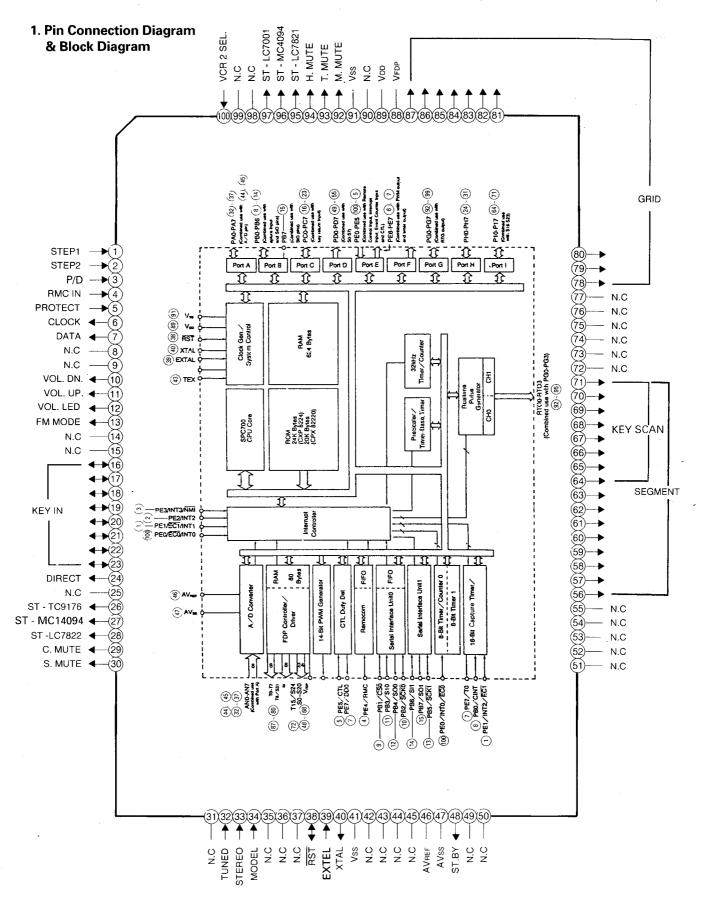

- 1. Remove the Cover Top 50, referring to the previous step 1.
- 2. Disconnect (CP801,CP703,CP101,CP702 and CP701) from the Power Supply P.C.Board (PCB7).
- 3. Unsolder all leads (P1 and P2) from the AC Power Cord 48.
- 4. Remove 2 screws S1, from the Chassis Back 46.
- 5. Remove 2 screws 55 on the Power Supply P.C.Board (PCB7) and then remove it.

III MAIN P.C.BOARD (PCB1) REMOVAL

- 1. Remove the Cover Top 50, referring to the previous step 1.
- 2. Remove the Tuner P.C.Board (PCB9), referring to the previous step 8.
- 3. Disconnect (CP103 and CP401) from the Main P.C.Board (PCB1).
- 4. Disconnect (CP101) from the Power Supply P.C.Board (PCB7).
- 5. Remove the card cable from wafer (CP501) on the Main P.C.Board (PCB1).
- 6. Remove 8 screws 31 and 2 screws 33 from the Chassis Back 46.
- 7. Remove 8 screws 55 on the Main P.C.Board (PCB1) and then remove it.

CIRCUIT DESCRIPTION

CPU (IC801): CXP82220-107Q (8 bit SINGLE-CHIP MICROCOMPUTER)

2. Pin Functions

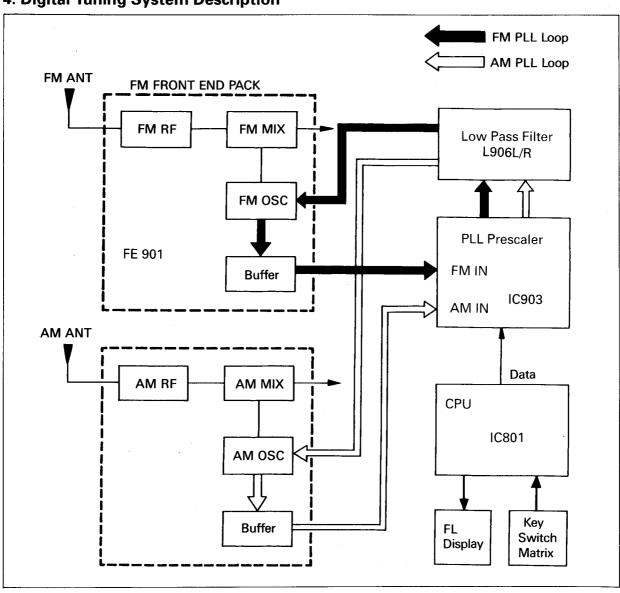

Pin No.	Symbol	Description					
1/2	STEP 1 / STEP 2	Input to select frequency band and step according to region.					
		REGION FREQUENCY STEP 1 STEP 2					
		AMERICA FM: 87.5 - 107.9 MHz 200 kHz H H					
		AM: 520 - 1710 kHz 10 kHz					
3	P/D	Input to detect newer down (At III II it is not					
4	RMC IN	Input to detect power down. (At "L", it is active.) Input for remote control signal. (At "L", it is active.)					
5	PROTECT	Signal input for protection. (At "L", it is active.)					
6/7	CK / DA	Clock/Data output for LC7001 LC7000 OD 1001 TO0170					
8/9	N.C.	Clock/Data output for LC7821, LC7822, GD4094, TC9176 and LM700 Not used !					
10	VOL. DOWN						
10	VOL. DOVIN	Output to drive volume motor for decreasing volume level.					
11	VOL. UP	(At "H", it is active.)					
''	VOL. UP	Output to drive volume motor for increasing volume level.					
12	\(\(\O\) ED	(At "H", it is active.)					
	VOL. LED	Output to drive volume LED.					
13	FM MODE	Output to select FM MONO or STEREO.					
44/45	N.O.	At "H", FM MONO is selected and at "L", FM STEREO is selected.					
14 / 15	N.C.	Not used !					
16 - 23	KEY IN	Data input for key scan.					
24	DIRECT	Output to allow sound signal to by-pass tone control circuitry.					
		(At "H", it is active.)					
25	N.C.	Not used !					
26	ST-TC9176	Chip enable output for TC9176.					
27	ST-MC14094	Chip enable output for MC14094.					
28	ST-LC7822	Chip enable output for LC7822.					
29	C. MUTE	Output for center mute.					
		Output, "H' under the following conditions.					
		1. When power is turned on or off.					
		2. When center mode is turned on or off.					
		3. When center mode is selected.					
		4. When test tone mode is on or off or when the channel is changed					
		in the test tone mode.					
		5. When the protection terminal's level is "L".					
		6. When "-∞" mute signal is received from the commander.					
30	S. MUTE	Output for surround mute.					
		Output, "H" under the following conditions.					
		1. When power is turned on or off.					
		2. When surround mode is selected.					
		3. When test tone mode is on or off or when channel is changed					
		in the test tone mode.					
		4. When adjusting delay time.					
		5. When the protection terminal's level is "L".					
-		6. When "- \infty" mute signal is received from the commander.					
31	N.C.	Not used !					
32	TUNED	Input to detect station during tuning.					
İ		If "L" is inputed during tuning, tuning stops at that frequency.					
33	STEREO	Input to light "STEREO" indicator. (At "L", it is active.)					

Pin No.	Symbol	Description
34	MODEL	Input to select. (At "H", it is active)
35 - 37	N.C.	Not used ! (Connected to V _{DD})
38	RST	Input to reset CPU.
39	EXTAL	Input for crystal oscillator.
40	XTAL	Output for crystal oscillator.
41	V _{SS}	Ground.
42	N.C.	Not used!
43 - 45	N.C.	Not used ! (Connected to V _{DD:)}
46	AV_{ref}	Reference voltage. (Connected to 5 V, not V _{DD} .)
47	AV _{SS}	Ground.
48	ST.BY	When power is on, control data output is "H".
	·	When power is off, control data output is "L" and last memory
		function is activated.
49 - 55	N.C.	Not used!
56 - 63	SEGMENT	Segment signal output for FIP.
64 - 71	SEGMENT / KEY SCAN	Segment signal output for FIP and Data output for key scan.
72 - 77	N.C.	Not used!
78 - 87	GRID	Grid signal output for FIP.
88	V_{FDP}	Power supply for FIP controller.
89	V_{DD}	+5 V power supply.
90	N.C.	Not used!
91	V _{SS}	Ground.
92	M. MUTE	Output for main mute.
		Output is "H" under the following conditions.
		1. When power is turned on or off.
		2. When function is changed.
		3. When the protection terminal's level is "L".
		4. When "-∞" mute signal is received from the commander.
93	T. MUTE	Output for tuner mute.
		Output, "H" under the following conditions.
		1. When power is turned on or off.
	,	2. When tuner band or FM mode is changed.
		3. When Tuning Up or Down button is pressed.
		4. When recalling the station stored in memory.
		5. When the protection terminal's level is "L".
		6. When "-∞" mute signal is received from the commander.
94	H. MUTE	Output for headphone mute.
		Output, "H" under the following conditions.
		1. When power is turned on or off.
		2. When selecting the input function.
		3. When the protection terminal's level is "L".
		4. When "-∞" mute signal is received from the commander.
95	ST-LC7821	Chip enable output for LC7821.
96	ST-MC4094	Chip enable output for MC4094.
97	ST-LC7001	Chip enable output for LC7001.
98 / 99	N.C.	Not used !
100	VCR 2 SEL.	Input to select VCR 2 rear or front.
		At "H", VCR 2 rear is selected and at "L", VCR 2 front is selected.

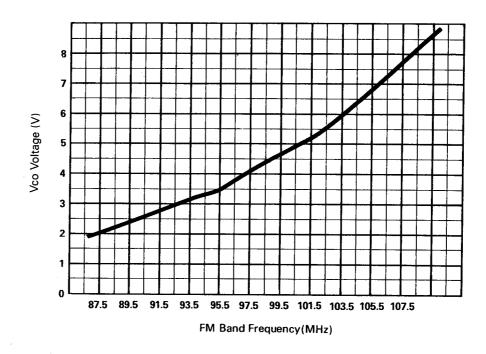

3. Key Matrix

4. Digital Tuning System Description

• Vco vs. FM Band Frequency Curve

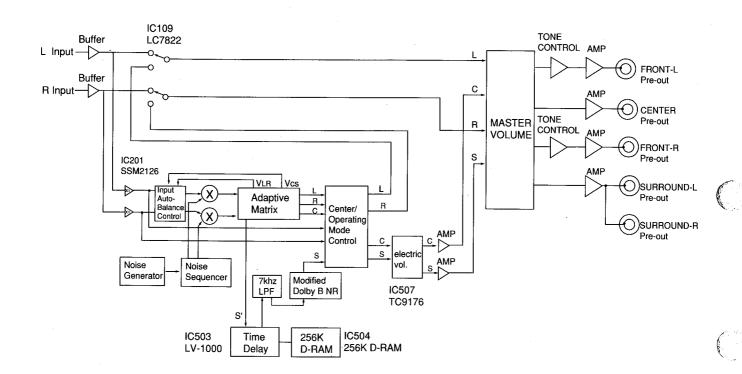

• Vco vs. AM Band Frequency Curve

5. DOLBY SURROUND CIRCUITS

Fig. 1 is a block diagram of the Dolby surround circuit.

The microprocessor transfers the data to the Dolby Pro – Logic decoder and Time Delay Device to operate the circuits in each mode.

<Block diagram of the Dolby surround circuit>
Fig. 1

1) OFF

Set to this mode to listen to ordinary stereo sound. The rear L/R and center outputs will be muted.

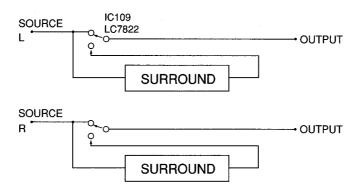

Fig. 2

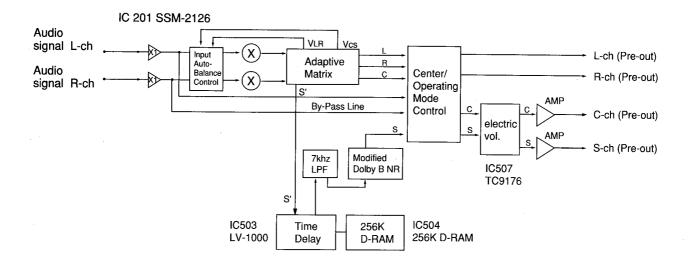

2) DOLBY PRO - LOGIC CIRCUIT

Dolby Pro – Logic is a sound effect system for movies developed by the Dolby Laboratories Licensing Corp. IC201 (SSM2126) is a Dolby Pro – Logic decoder IC.

When an audio signal recorded using the Dolby Pro – Logic system is sent to this IC, the left, right, center and surround components are separated.

The surround signal component is delayed by the delay IC503 (LV-1000), IC504 (256K D-RAM).

Fig. 3 Shows the configuration of the dolby decoder.

<Flow of signals within the system in the Dolby Pro – Logic mode>
Fig. 3

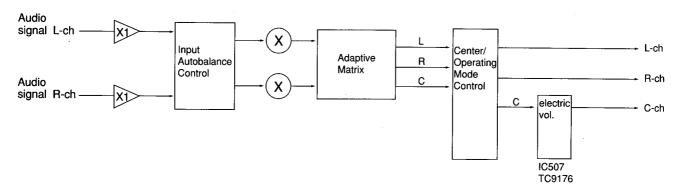

With Dolby pro logic, three center modes depend on the use of a center speaker as follows.

NORMAL	: Bass frequencies are sent only to the Left and Right Front channels. Select this mode when the Center Speaker is smaller than the Left and Right speakers.
WIDE	: Bass frequencies are sent to the Left, Center and Right speakers. Select this mode when the Center speaker is approximately the same size as the Left and Right speakers.
PHANTOM	: Center channel information is sent to the Left and Right speakers. Select this mode when you do not have a center channel speaker.

3) 3-STEREO CIRCUIT

In 3 – stereo mode, surround sound is sent to front Light channel and front Right channel and no surround sound is sent to surround channel.

IC201 SSM2126

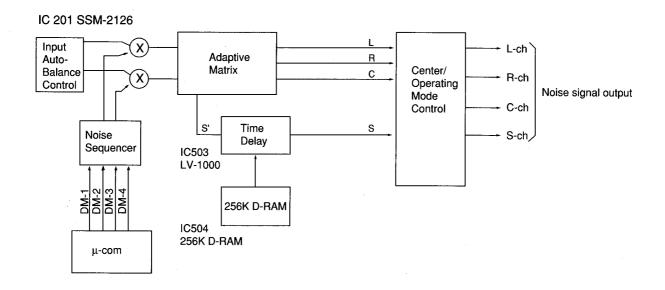

<Flow of signal within the system in the 3 – stereo mode> Fig. 4

4) TEST TONE GENERATOR

The test tone generator generates a test tone (noise) to check the balance of sound output from each speaker in the Dolby pro logic mode. (This circuit is producted under license of the Dolby Laboratories Licensing Corp.) The noise generator signals shown the table below applies to the DM –1 / 2 / 3 / 4 pins of IC 201. The test tone is sent to the loud – speakers at 2 second intervals in the following sequence: Left, Center, Right, Rear (both rear channels).

Pin Name	DM-1 (Pin 23)	DM-2 (Pin 24)	DM-3 (Pin 25)	DM-4 (Pin 26)
L – CH.	L	Н	L	L
C – CH.	L	Н	L	Н
R - CH.	L	Н	Н	L
S – CH.	L	Н	Н	Н

<Flow of noise signals within the system>
Fig. 5

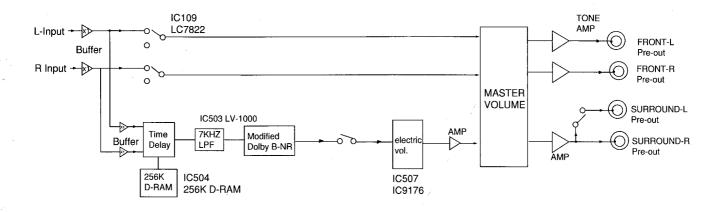

6. OTHER SURROUND CIRCUITS

This model has Theater and Stadium surround circuits, except Dolby surround circuits. Theater / Stadium modes work best for recorded concerts and other music programs. In these modes, the front speakers provide a normal stereo effect while the rear speakers provide a reverberated sound.

This reverberation helps simulate the sound you might hear at a live concert.

1) THEATER SURROUND CIRCUIT

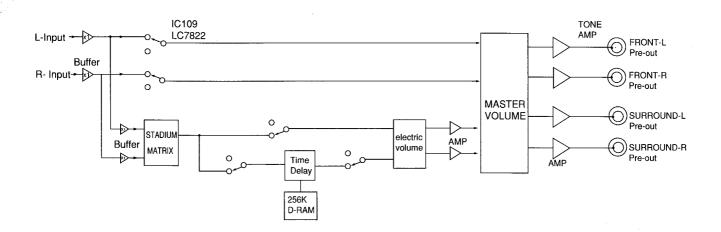

Fig. 6 flow of signal of the theater surround circuit. In this mode, the center output will be muted.

<Flow of signal of the theater surround circuit>
Fig. 6

2) STADIUM SURROUND CIRCUIT

Fig. 7 is flow of signal of the stadium surround circuit. In this mode, the center output will be muted.

<Flow of signal of the theater surround circuit>
Fig. 7

ALIGNMENT PROCEDURES

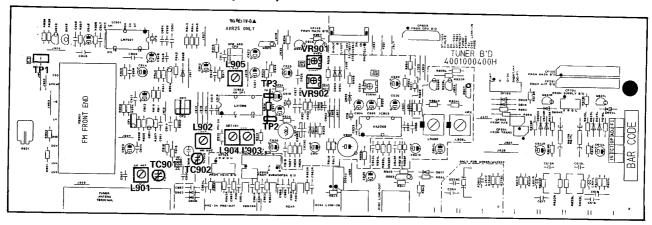

1. Equipment Required

- AM Standard Signal Generator (AM SSG)
- Oscilloscope
- AC Voltmeter
- FM Standard Signal Generator (FM SSG)
- Stereo Modulator

- Audio Generator
- Distortion Meter
- DC Voltmeter
- Frequency Counter

Note: Disconnect external FM antenna prior to alignment.

2. Alignment and Test Points (PCB9)

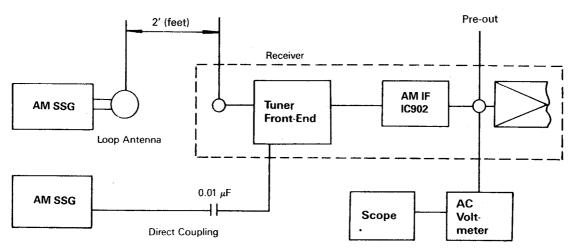

3. AM IF and RF Alignment

Preparation

- 1. Output of Signal Generator should not be higher than necessary to obtain an optimum output reading.
- 2. Signal Generator Modulation: 30%.
- 3. Switch: Press to AM.

Step	Signal Generator Frequency	Receiver Frequency on the Display	Equipment Connection	Adjustment Point	Adjust for
1	999 kHz (400 Hz, Mod.)	522 kHz	DC Voltmeter TP1	L902	1.2 V reading
		1611 kHz	DC Voltmeter TP1	TC902	8.5 V reading
2	594 kHz (400 Hz, Mod.)	594 kHz	AC Voltmeter to TAPE OUT jack.	L901 (ANT Coil)	Maximum reading
3	1404 kHz (400 Hz, Mod.)	1404 kHz	AC Voltmeter to TAPE OUT jack.	TC901 (ANT Trimmer)	Maximum reading
4	450 kHz (400 Hz, Mod.)	Place at a nonin- terference spot around 600 kHz.	AC Voltmeter to TAPE OUT jack.	L905 (IFT)	Maximum reading
5	999 kHz (400 Hz, Mod.)	999 kHz	Same as Step 1.	VR901	FL display 'TUNED' Indication on receiver with AM SSG Output level of 800 μV/m

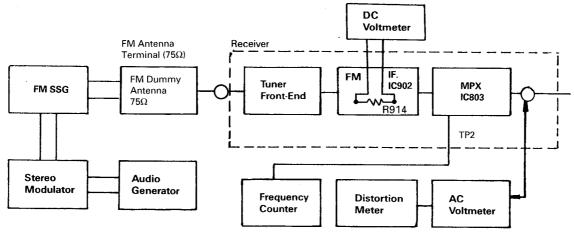

AM Alignment Connection

4. FM IF Alignment

Preparation

- 1. Signal Generator output should be no higher than necessary to obtain an optimum output reading.
- 2. Switch Press to FM.
- 3. Signal generator deviation: 40 kHz.

Step	Signal Generator Frequency	Receiver Frequency Display	Equipment Connection	Adjustment Point	Adjust for
1	98.0 MHz (1 kHz, Mod.)	98.0 MHz	Distortion meter to TAPE OUT jack	L904	Minimum distortion (0.2%) 1kHz mono.
3	98.0 MHz (1 kHz, Mod.)	98.0 MHz	Same as Step 1	VR902	FL display 'TUNED' Indication on receiver with FM SSG output level of 10 µV/m
3	98.0 MHz (1 kHz, Mod.)	98.0 MHz	DC Volt meter across R914 which are TP2 and TP3.	L903	Zero reading on DC volt meter.

FM RF/IF and MPX Alignment Connction

5. MPX Alignment

Preparation

1. Switch: Press to FM.

2. Tuner for 98 MHz on band.

3. Signal Generator output level : 1000 $\,\mu V$.

4 Deviation : 40 kHz, at 100% modulation of composite signal.

5. Connect Signal Generator to FM antenna terminal through FM dummy antenna (75 Ω).

Step	19 kHz Modulation Level	Signal Generator Frequency Setting	Equipment Connection	Adjustment Point	Adjust for
1	8% Mod.	Composite to channel 1kHz R	AC voltmeter to TAPE OUT jack of R channel	_	Confirm audio output as about 450mV and reference as "0dB".
2	8% Mod.	Composite to channel 1 kHz L	AC voltmeter to TAPE OUT jack of R channel	VR803	AC voltmeter reading should be at least 40 dB below.
3	8% Mod.	Composite to channel 1 kHz R	AC voltmeter to TAPE OUT jack of L channel	VR803	Same as Step 2.

If you could not obtain $-40 \, \text{dB}$ readings in Steps 2 and 3 (compared with Step 1), readjust VR803 until you obtain $-40 \, \text{dB}$ readings for both Steps 2 and 3. Nominal is $-45 \, \text{dB}$.

TROUBLESHOOTING

Symptom	Cause and Remedy
Receiver inoperative (FIP indicator does not light)	 A) Faulty AC power cord. Replace. B) Defective the power switch. Replace. C) Broken wire in the power transformer. Replace the power transformer. D) Blown power Replace the fuse.
Fuse blows when power is turned on.	A) Defective power transformer. Replace. B) Short in the primary or secondary of the transformer circuitry. Repair the trace.
PHONO input inoperative	A) Poor contact in phono input jack. Repair or replace the jack. B) Defective phono switch or IC106. Replace.
LOUDNESS has no effect	A) Defective loudness switch. Replace. B) Defective resistors R301 L/R and capacitors C301 L/R. Replace the defective component(s).
FM inoperative	 A) Defective front-end. (FE-901) Replace. B) Defective FM switch. Replace the switch C) Defective transistor Q901, Q904, Q905 and IC'S IC901, IC902, IC903 Replace the defective transistor(s) or IC(s). D) Defective coil L903 or L904. Replace the coil(s). E) Defective lead-in. Repair or replace the lead-in. F) Ceramic filter CF901, CF902 defective. Replace the defective ceramic filter(s). G) Defective controller circuit component. Replace.
Poor multiplex separation	A) Improper adjustment. Readjust VR803. (Refer to MPX Alignment.) B) IC903 defective. Replace. C) Variable resistor VR803 defective. Replace the variable resistor.
STEREO indicator does not light .	 A) Defective indicator in FIP (Fluorescent Indicator Panel). Replace. B) Improper adjustment of VR903 of tuner board. (PCB9). Make readjustment. C) Defective IC903. Replace the defective component.

Symptom	Cause and Remedy		
FM volume not sufficient	A) If volume from both L and R channels is not loud enough: Front end Section defective. Faulty IC902, Coil L903 Defective C907 of tuner Board (PCB9). If sound of one channel is not loud enough: Defective L906 L/R.		
FM Mono has no effect	A) Defective FM MODE switch. Replace.		
AM inoperative	 A) Damaged IC902 of tuner board. Replace. B) Defective L901, L902, L905 or CF3 of tuner board (PCB9). Replace the defective component(s). C) Resistor R915, R926 defective. Replace the defective resistor(s). D) Capacitor C906, C922, C926 defective. Replace the defective capacitor(s). E) Defective AM switch Replace. F) Defective varicap diode VD901, VD902. Replace varicap diode(s). G) Damaged AM loop antenna. Repair or replace. H) Defective controller circuit component. Replace. 		
Bass control has no effect	 A) Variable resistor BASS defective. Replace. B) Defective R416L/R, R417L/R, R418L/R, C414L/R, C415L/R Replace the defective component(s). 		
Treble control has no effect	A) Variable resistor TREBLE defective. B) Defective C417L/R, C418L/R, R419L/R, R420L/R Replace the defective components(s).		
Auto tune inoperative (UP/DOWN)	 A) Poor contact in Up/Down key. Repair replace. B) Defective IC801 Replace. C) Defective FIP Display. Replace. D) Defective tuner circuit component. Replace. E) In case of FM only, improper adjustment of FM front-end. Readjust. 		
Manual tune inoperative (UP/DOWN) (AM or FM)	A) Poor contact in Up/Down key. Replace. B) Defective IC801. Replace.		

Symptom	Cause and Remedy
Memory setting (keys 1-10) inoperative	A) Poor contact in memory keys 1-10. Replace. B) Poor contact in memory set key. Replace. C) Defective IC801.
	Replace the defective component.
FIP inoperative	A) FIP defective. Replace. B) Defective IC801. Replace C) Defective X-TAL 801. Replace.
Noise Volume control	A) Defective IC301. Replace. B) Defective capacitor C304 or C305 Replace the defective capacitor(s).
Remote Control Unit inoperative	A) Weak Battery. Replace. B) Defective. Replace. C) Defective IC801 or Sensor 801 (CPU Board) or IC01. Replace.

PRODUCT SAFETY NOTICE

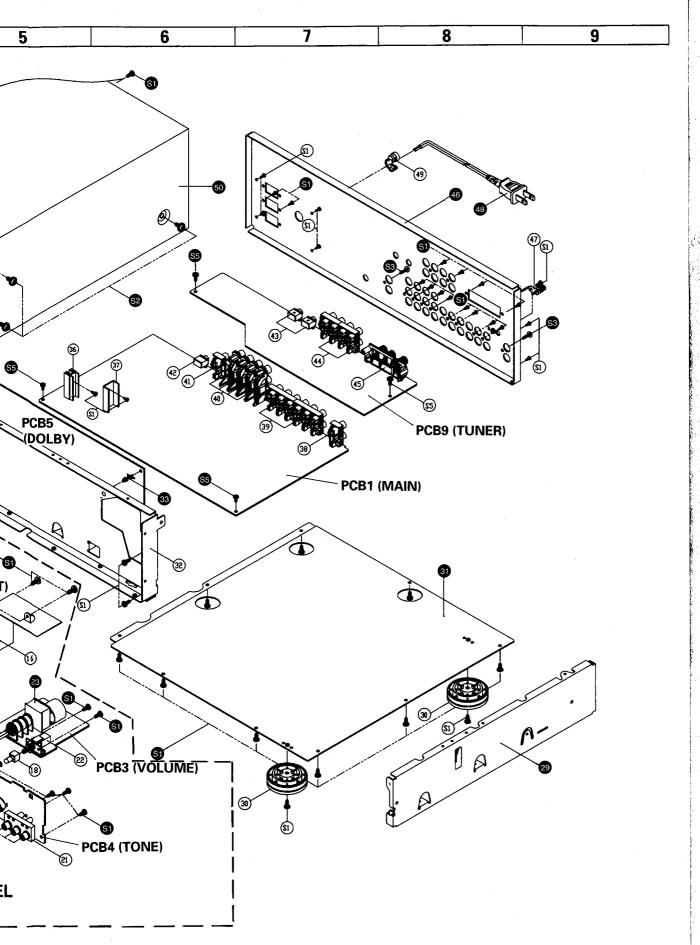

Each precaution in this manual should be followed during servicing. Components identified with the IEC symbol Δ in the parts list are of special significance to safety. When replacing a component identified with Δ , use only the replacement parts designated, or parts with the same ratings of resistance, wattage or voltage that are designated in the parts list in this manual. Leakage-current or resistance measurements must be made to determine that exposed parts are acceptably insulated from the supply circuit before returning the product to the customer.

IC FUNCTIONAL BLOCK DIAGRAM

GD4052B : IC103 (Audio Signal Switching)

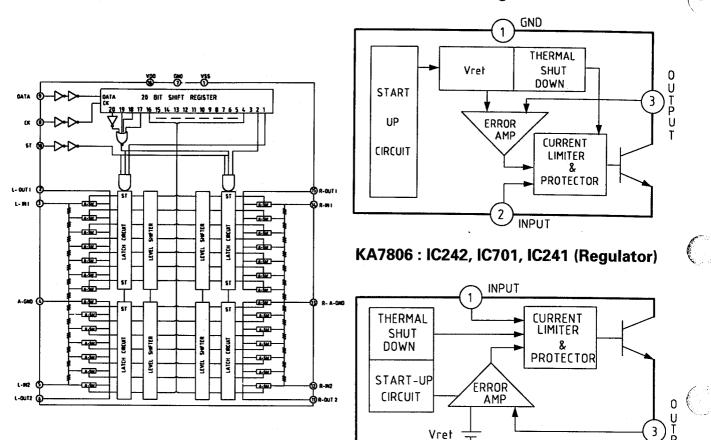

KIA4559P/KIA75559P: IC106 (OP-Amp)

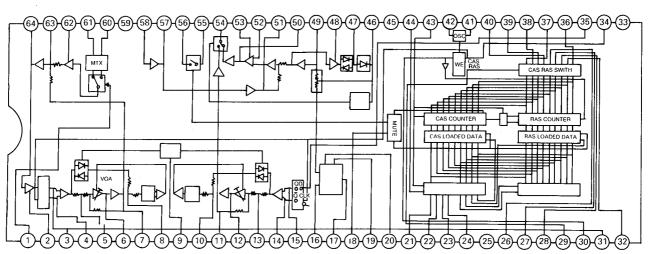

TC9176P: IC507 (Electronic Volume)

KA7915 : IC243 (Regulator)

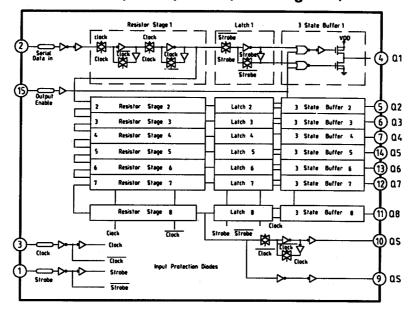

GND

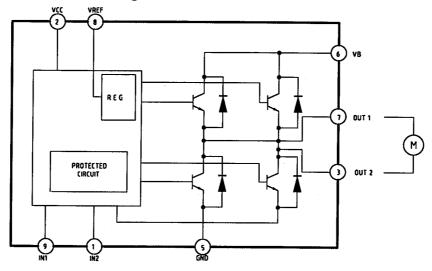

LV-1000NA: IC503 (Time Delay Device)

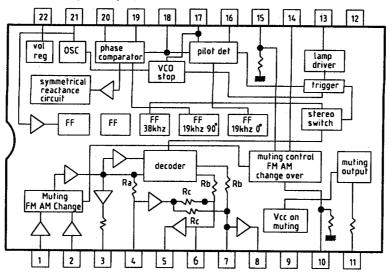

MC14094BCP: IC105, IC202, IC505 (Shift Registor)

TA7291S: IC301 (Bridge Driver)

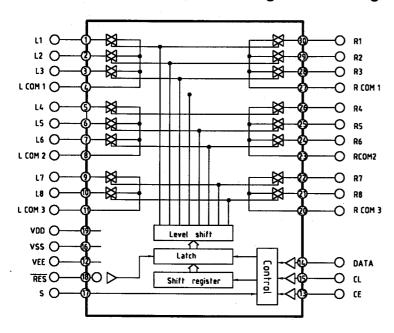

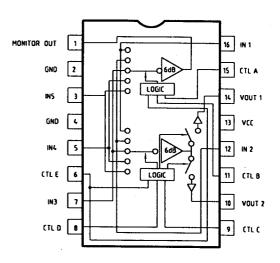

LA3410: IC903 (MPX)

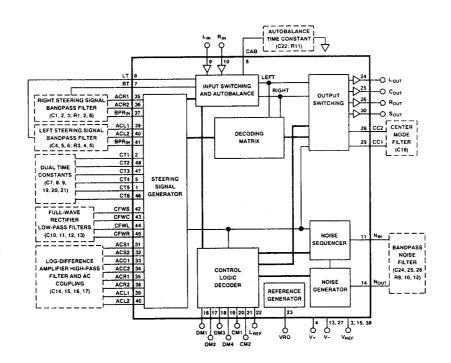

LC7822 : IC109, IC506 (Audio Signal Switching)

BA7625 : IC104 (Video Switching)

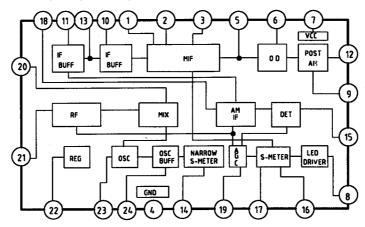

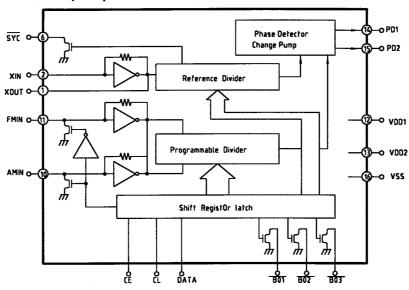

SSM-2126A: IC201 (Dolby Decoder)

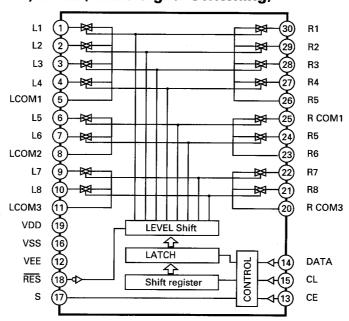

LA1266: IC902 (AM/FM IF)

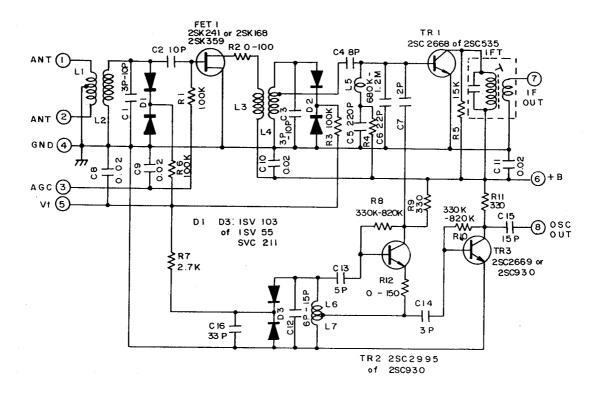

LM7001: IC901/(PLL)

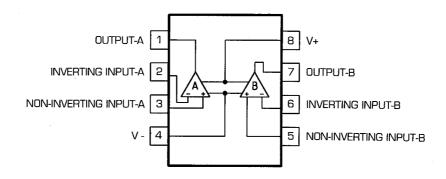

LC7821 : IC101, IC102 (Audio Signal Switching)

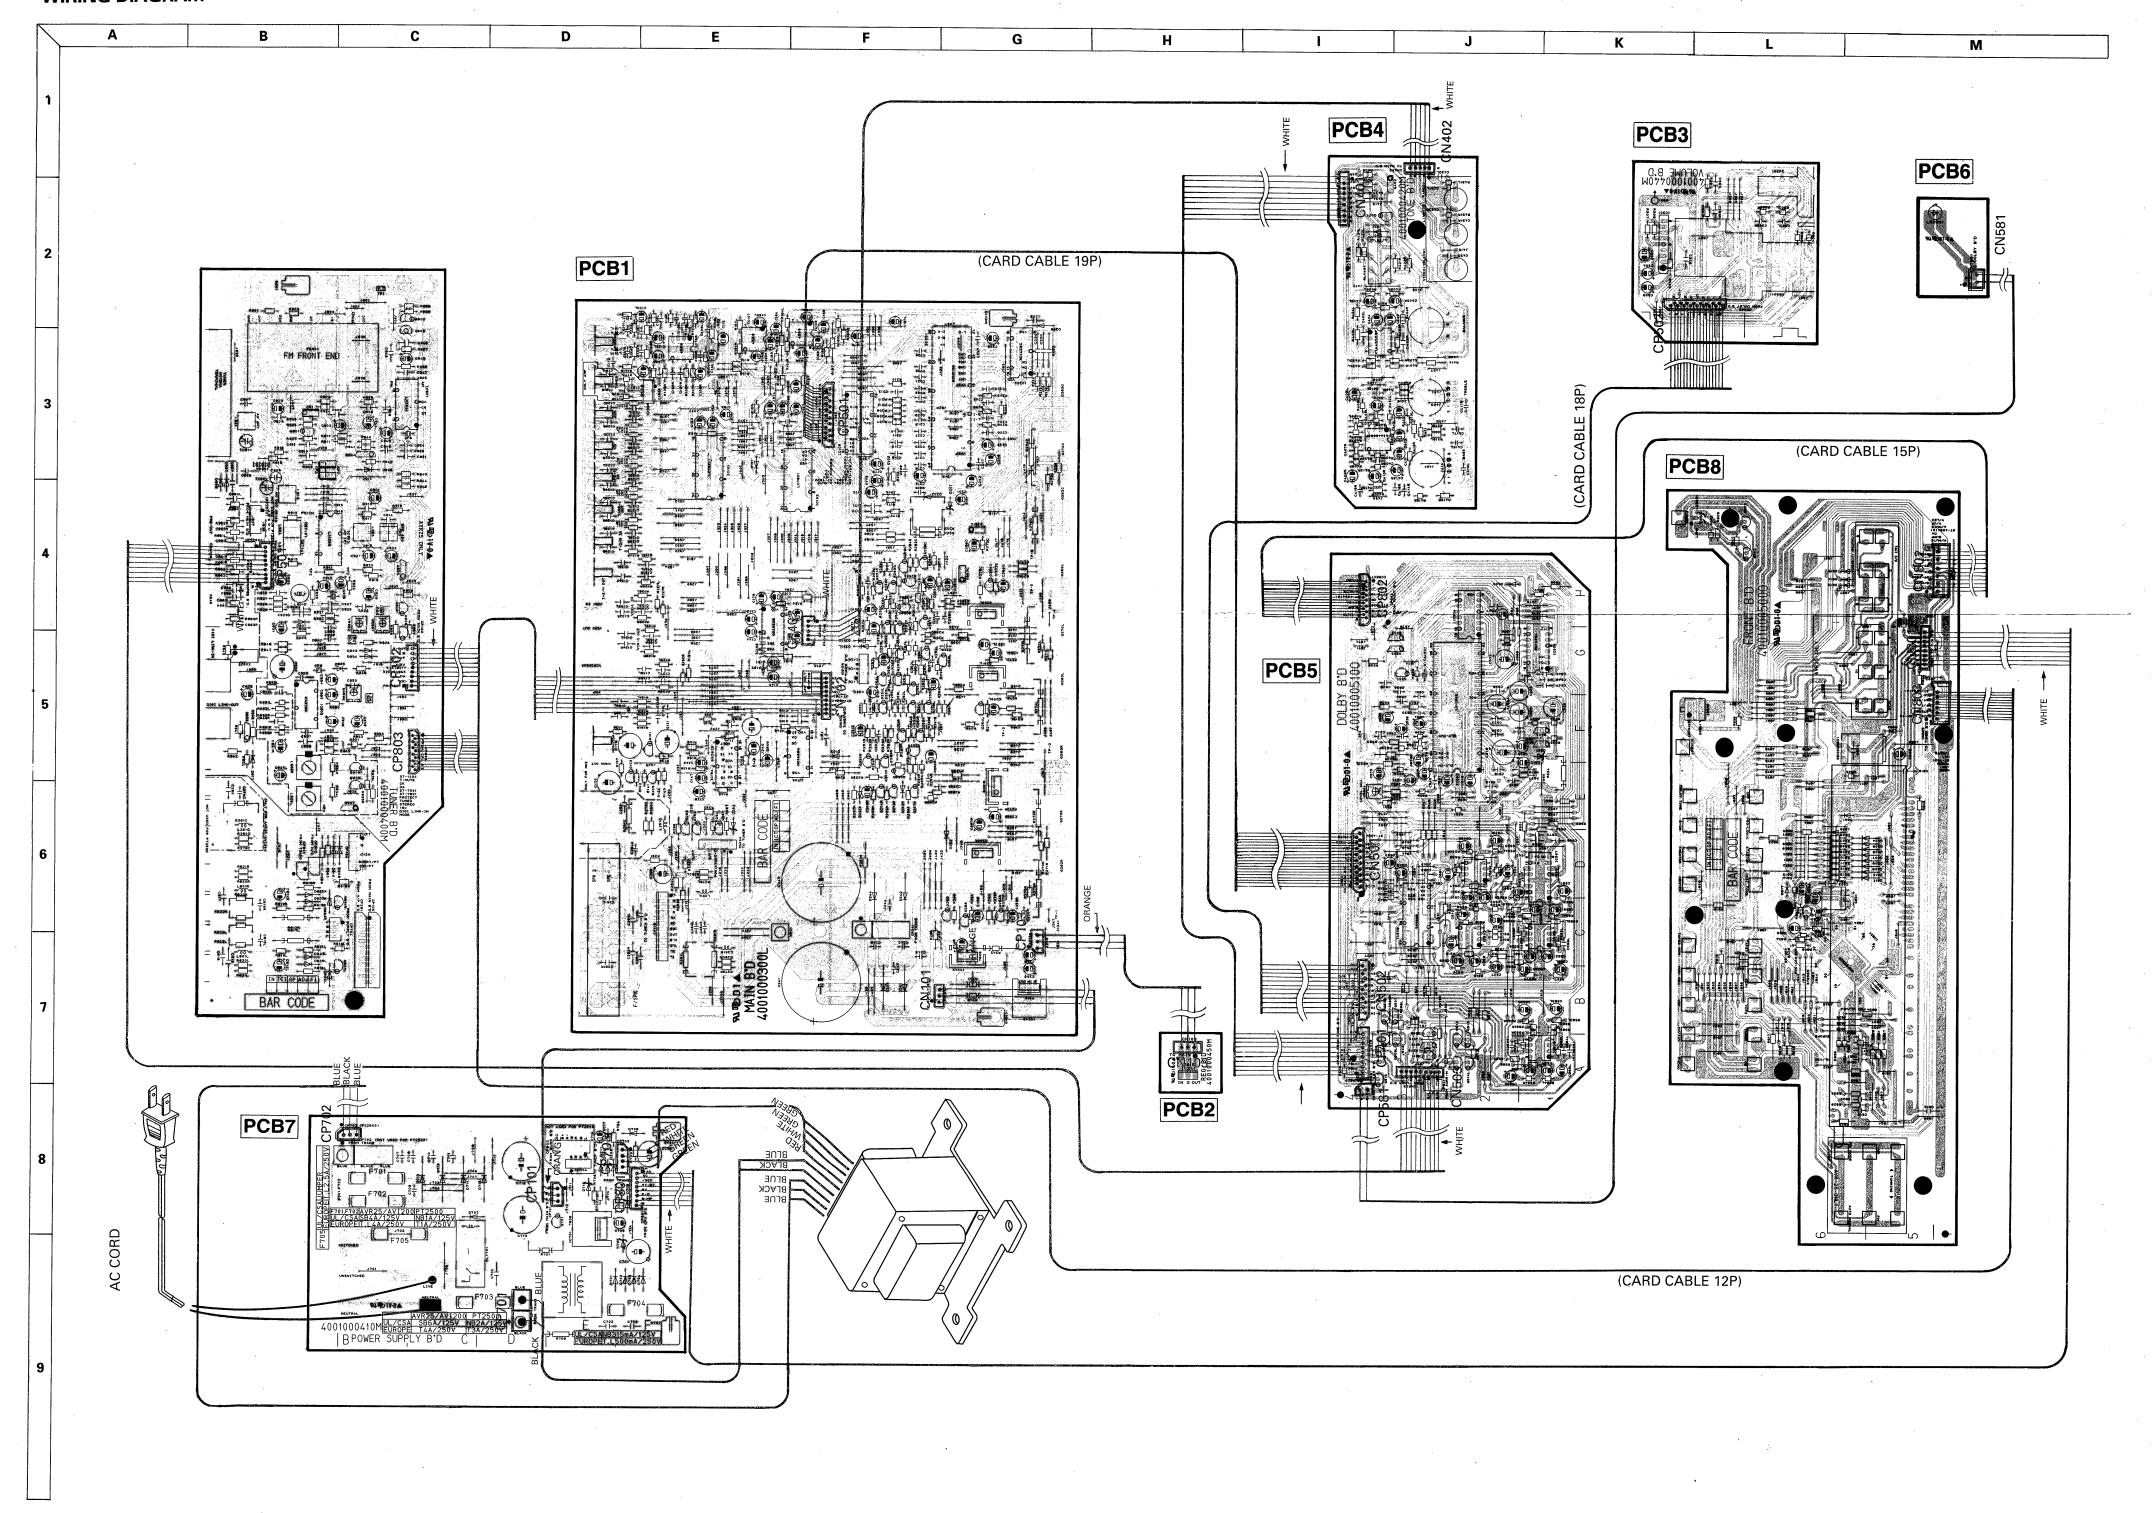

FE901 FE407-A15

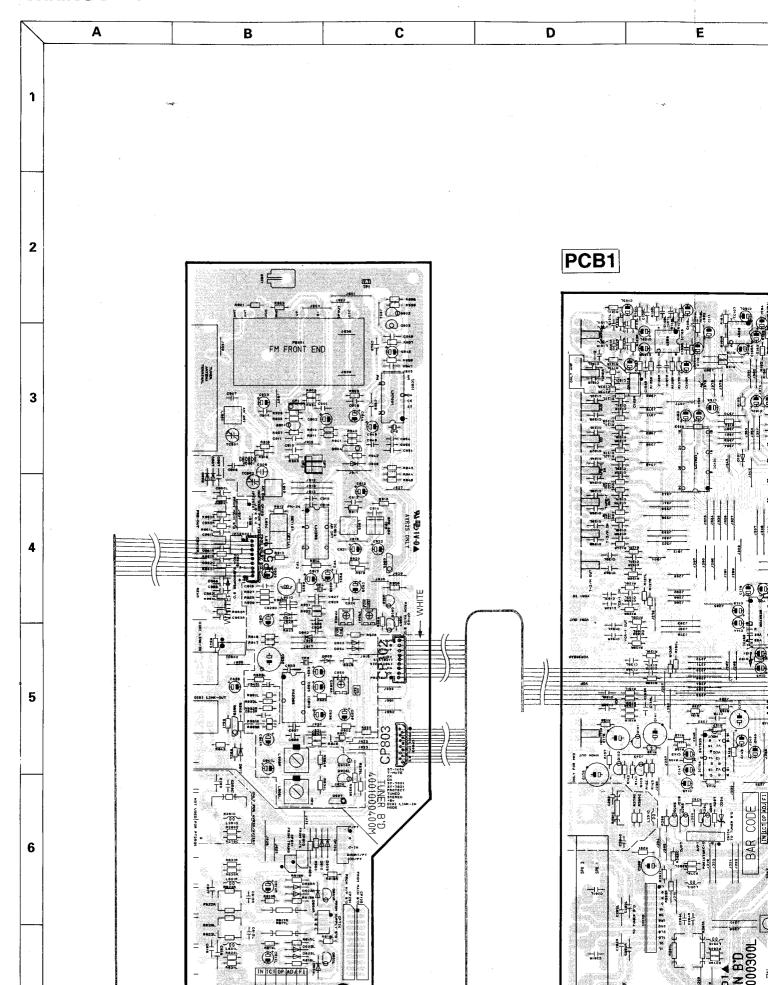

NE5532N: IC107, IC108, IC401, IC402, IC501, IC502, IC508, IC509 (OP-Amp)

REAR PANEL CONNECTIONS

Rear Panel - Audio and System Connections

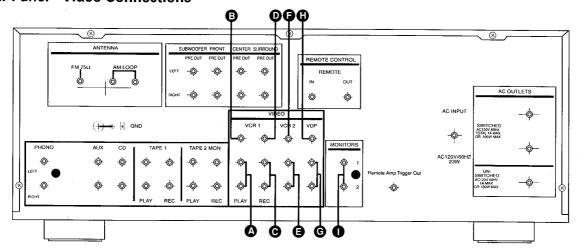

- A FM Antenna
- AM Antenna
- Phone In
- Aux In
- CD In
- **∂** Tape1 In
- G Tape1 Out (REC)

- **●** Tape2 Monitor In
- Tape2 Monitor Out (REC)
- Subwoofer Pre-Out
- **☼** Front Pre-Out
- Center Pre-Out
- Surround Pre-Out

- Remote Control-In
- Remote Control-Out
- Power Cable
- Switched AC Outlets
- UnSwitched AC Outlets
- S Remote Amp Trigger Out

Rear Panel - Video Connections

- **O** VCR1 Audio In (PLAY)
- VCR1 Video In
- **O** VCR1 Audio Out (REC)
- VCR1 Video Out
- VCR2 Audio In
- VCR2 Video In
- **©** VDP Audio In
- VDP Video In
- TV Monitor Out
